loopline systems

Fullstack Developer, Go | TypeScript | PHP (m/f/d)

We are looking for a motivated fullstack developer who is passionate about building great user-friendly applications. You deliver a Wow to our customers. You'll be an integral part of our international team and work closely together to deliver the best possible product.

Our Offer

- Be part of a highly passionate and diverse team
- Work in an ambitious environment with a strong focus on personal growth and open communication
- Opportunity to contribute your own ideas and develop your skills further, as well as a steep learning curve
- Our company culture is characterized by open and constructive feedback, shared knowledge and learning culture: we try and learn – also by making mistakes
- Lots of laughter and fun, not only because one of our core values is: "Laugh with others and about yourself"
- Fast decision-making processes and flexible working hours

Your Mission

- Designing and implementing Loopline Systems' microservice based backend and frontend using clean code principles, ensuring code quality, performance and security of our apps
- You develop web applications with different frontend frameworks, mainly react
- Tackling special architectural challenges (e.g. multi-client setups, encryption)
- Handling the maintenance and enhancement of the existing software architecture
- You manage parts of the hardware infrastructure with ansible, salt and docker

Your Profile

- You have at least 4 years of experience creating large scale web apps
- You have experience with single-page application frameworks (AngularJS, React, etc.)
- Experience with microservice implementations based on REST+rpc and with queuing systems
- Proper knowledge of the HTTP Protocol
- You have a solid knowledge of PHP
- You at least had your first experience with Golang and are open for a change to Go
- Experienced with git
- Familiar with relational databases - preferable mysql or postgres
- The command line is your best friend

Front End
JS, TypeScript, React, Redux, styled-components, Webpack, Jest, Enzyme

Back End
Docker, Go, PHP7, Nginx, AMQP (RabbitMQ), MySQL, PostgreSQL, Elasticsearch, Apache Thrift

Infrastucture
Docker, Ansible, Salt

Senior Fullstack Developer, Go | TypeScript | PHP (m/f/d)

We are looking for a motivated senior fullstack developer who is passionate about building great user-friendly applications. You deliver a Wow to our customers. You'll be an integral part of our international team and work closely together to deliver the best possible product.

Our Offer

- Be part of a highly passionate and diverse team

- Work in an ambitious environment with a strong focus on personal growth and open communication

- Opportunity to contribute your own ideas and develop your skills further, as well as a steep learning curve

- Our company culture is characterized by open and constructive feedback, shared knowledge and learning culture: we try and learn – also by making mistakes

- Lots of laughter and fun, not only because one of our core values is: "Laugh with others and about yourself"

- Fast decision-making processes and flexible working hours

Your Mission

- Designing and implementing Loopline Systems' microservice based backend and frontend using clean code principles

- Tackling special architectural challenges (e.g. multi tenant setup, rpc, load balancing)

- Taking responsibility for code quality, performance and security of our applications

- Handling the maintenance and enhancement of the existing software architecture

- Integrating third-party APIs

Your Profile

- Several years of experience creating large scale web apps

- Experience with microservice implementations based on REST+rpc and with queuing systems

- Proper knowledge of the HTTP Protocol

- In-depth knowledge of Golang, PHP and an understanding of modern software paradigms

- Experienced with Javascript (typescript and react are a plus), html and css

- Experienced in git

- Familiar with relational databases - preferable mysql or postgres

- The command line is your best friend

Front End	Back End	Infrastructure
TypeScript, React, Redux, styled-components, Webpack, Jest, Enzyme	Docker, Go, PHP7, Nginx, AMQP (RabbitMQ), MySQL, PostgreSQL, Elasticsearch, Apache Thrift	Docker, Ansible, Salt
